Fat-Head® Silicone Washer Nails

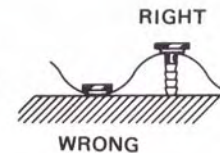

FOR GALVANIZED AND ALUMINUM ROOFING AND SIDING

Maze Fat-Head® Silicone Washer nails have proven themselves over many years of positive feedback from post-framers nationwide – they simply fasten metal roofing with a more positive seal. The specially formulated silicone washer resists the degrading effects of sunlight and ozone better than flat, black washers – and the extra thickness minimizes the problem of overdriving - resulting in a more professional installation.

Note: For best results, drive the Fat-Head® Silicone Washer nail until the washer begins to balloon slightly under the nail head. If the washer mushrooms up around the head, you have overdriven the nail

FOR ROOFING
Always nail through the tops or crests of corrugations, ribs or buttons, never in the valley.

MAZE NAILS, MANUFACTURED IN PERU, ILLINOIS, ARE TRULY AMERICAN-MADE.
